

ECNP Supports European Research Projects

European Quality In Preclinical Data

Improving quality and rigour in preclinical studies for the future of drug development

 **THE CHALLENGE** Poor-quality data is a serious challenge in drug development, negatively impacting the transition from preclinical to clinical testing, resulting in higher failure rates and longer drug development times. There is an urgent need for simple, sustainable solutions to improve data quality.

 **THE GOAL** To deliver simple and sustainable solutions to facilitate data quality without impacting innovation.

The EQIPD consortium at the General Assembly Meeting in Brussels, 2019

 **THE PLAN** By analysing the variables in study design and data analysis that influence outcomes across academia and industry, the project will define the components of an EQIPD quality management system and work to achieve a consensus among different stakeholders on quality management recommendations for research.

 **THE IMPACT** To pave the way for a cultural change in approaches to data quality in the medical research and drug development field.

Project co-ordinator: **Malcolm Macleod**,
University of Edinburgh, UK
Term: 1 October 2017 - 30 September 2020
