THINC-it®: a tool to evaluate cognitive dysfunction in depression

Chair: Bernhard Baune (Australia)
Venue: Austria Center Vienna, Vienna, Austria
Room: Hall F2
Date: Saturday 17 September 2016
Time: 14:45–16:30

Satellite symposium on the occasion of the 29th ECNP Congress with educational financial support provided by H. Lundbeck A/S

The European Accreditation Committee in CNS (EACIC) has granted 2 CME credits to this satellite symposium. To obtain your CME credits, fill out the evaluation form on www.eacic.eu.
THINC-it®: a tool to evaluate cognitive dysfunction in depression

14:45–14:50 Welcome and introduction
Bernhard Baune (Australia)

14:50–15:15 Why and how should we assess cognitive dysfunction in depression?
The impact of cognitive dysfunction on depression, including effects on psychosocial functioning. Consideration of how cognitive dysfunction is assessed in the clinic and the limitations of current practice, including the advantages and disadvantages of existing tools
Raymond Lam (Canada)

15:15–15:40 THINC-it®: what is it?
Insights into the development of THINC-it®, a clinical tool combining objective and subjective measures, which is capable of identifying and monitoring cognitive dysfunction in primary and secondary care
John Harrison (UK)

15:40–16:05 Validation of the THINC-it® screening tool
The outcomes of the THINC-it® validation study. The study included adults with major depressive disorder (MDD) and healthy volunteers, with the primary objective being to validate a tool capable of identifying the presence of cognitive dysfunction in adults with MDD
Roger McIntyre (Canada)

16:05–16:25 Q&A

16:25–16:30 Chair’s summary
Bernhard Baune
