

## Report for ECNP supported talk at the 4th Young psychiatrists' network meeting

### “Randomness and causality in medical practice and research”

ECNP supported Lecture on 4<sup>th</sup> of April 11.15-12.15 by **Professor Michal Davidson**

The 4th Young psychiatrists' network meeting took place in Wroclaw, Poland and was devoted to the topic: “A coin with many sides: different perspectives on mental illness”. It brought representatives of different point of view in current Mental Health Care together to inspire dialogues between them and young psychiatrists.

Presentation by Professor Davidson took part at 11.15–12.15 on the 2nd day of the meeting and began with short presentation about ECNP, its history and possibilities which young scientists have within it. Educational schools, ECNP congresses, different projects within ECNP were described. ECNP printed materials were put in bags of participants as well as presented at the registration desk.

Lecture “Randomness and causality in medical practice and research” by Professor Davidson raised questions about work of our mind and its peculiarities. He described in details which mistakes our mind does. Professor Davidson asked in different examples how one can be biased in clinical practice and research. Lecture was highly interactive and provoked intensive discussion.

In the evening a guided city-tour was organized to strengthen networking atmosphere and enjoy the beauty of Wroclaw – a “Venice of Poland”.

During the last day of the meeting there was an additional section on Young Psychiatrists' Associations where Olga Paravaya spread information and materials on J-MAP of ECNP.

The organizing committee of the 4<sup>th</sup> YPNM grateful to both Professor Davidson and ECNP support that made possible to have such an outstanding speaker in the programme of the event.

We are looking forward to future collaboration!
